Diaboliic @ DIHARD 3

Third Dihard Challenge Workshop

2021

Team Structure & Approach

- Team: LIUM, (Herve Bredin) IRIT, Wenda Chen & Sangeeta Ghangam

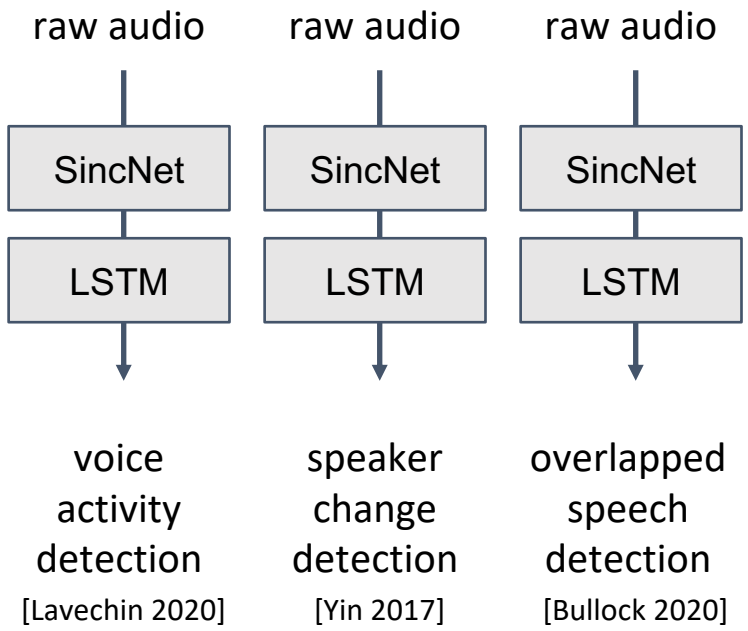
- Summary –

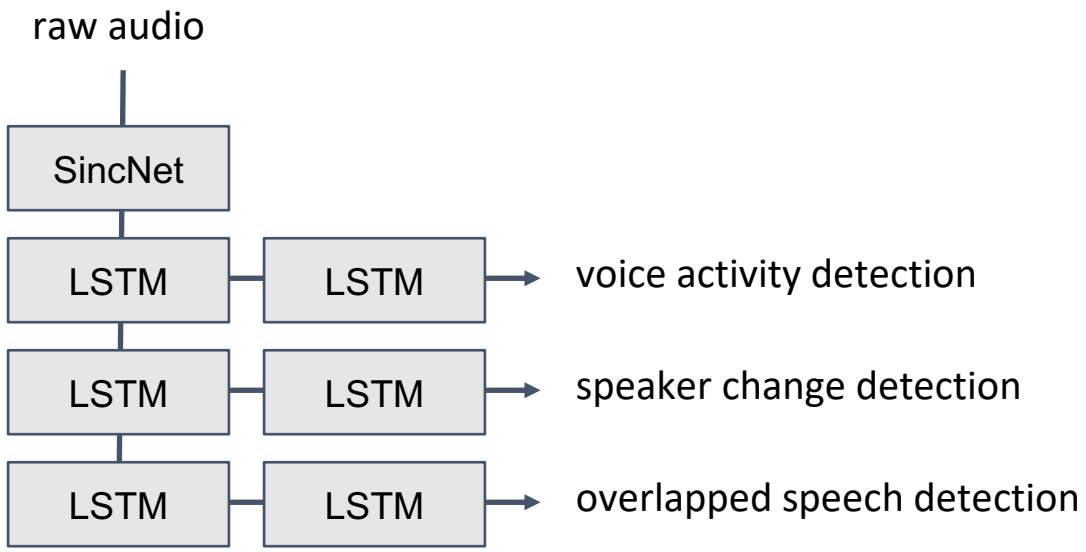
  - ❖ Team created different systems, each optimized for specific modules - Segmentation, Embedding, Re-segmentation
  - ❖ An ensemble approach was used for both the tracks as part of the final results submission

Segmentation

Based on `pyannote.audio` [Bredin et al.]

Slightly improved overlapped speech detection thanks to multi-task training

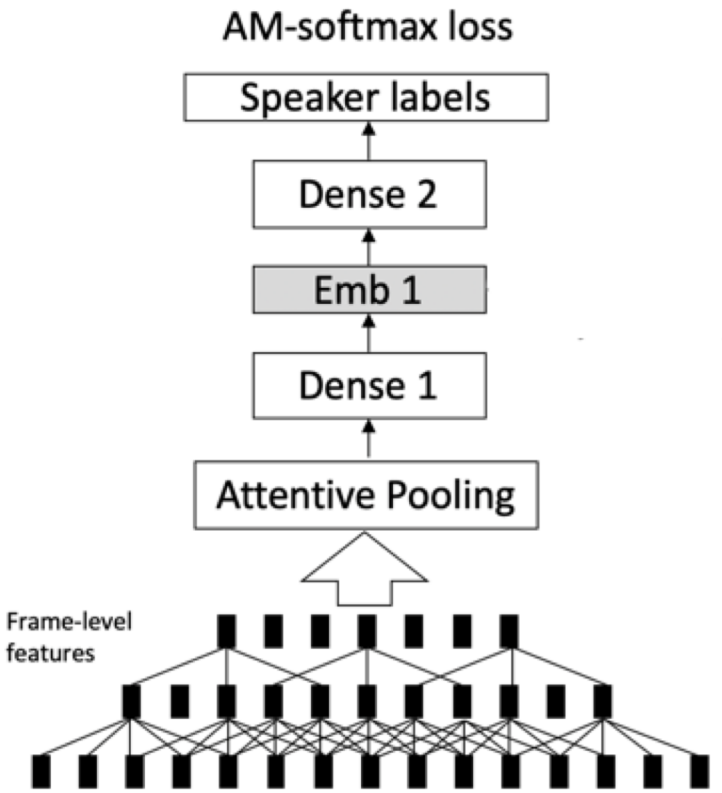




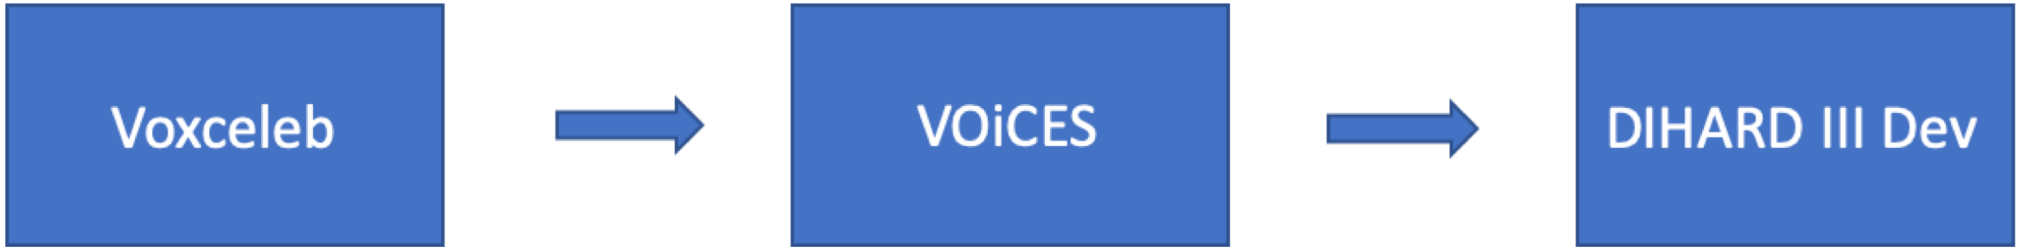
Efficient Embeddings

- X-vector model efficiencies for short-duration speech segments [Chen 2020]
- Distance: model_1 0.941; model_2 0.953

Models	1s	2s	4s	Full
Model1: AM-Softmax	12.74	6.70	3.99	1.90
Model2: AM-Softmax-IRL	13.67	7.13	3.69	1.49



- SID to diarization



Resegmentation - Sangeeta

- Based on VBx system [Landini et al.]
- Optimized Parameters - Ploop (0.40), Interpolation Alpha (0.75)
- 4% improvement in the DER when the resegmentation system was combined with the baseline pyannote system

Final Results Summary

- Track1 - Ensemble of following systems
  - Pyannote (Second DIHARD)
  - Baseline Third DIHARD system

These were combined used Dover-lap [Raj 2021]

- Track2 - Ensemble of following systems
  - Pyannote (Updated with segmentation/embeddings)
  - Resegmentation output
  - VBx Baseline System [Landini 2020v2]

These were combined using Dover [Stolcke]
